Nouveau Contour Academy classes are taught using only Nouveau Contour devices. While you are here you will be trained using our devices. It is not required to purchase one of our devices but if you do chose to, please refer to the following for pricing and details.

NC Simplicity \$1395.00

With its compact design it is the perfect device for those who travel and work in a variety of salons or offices. The Simplicity's hand piece is equipped with patented safety needles for safe pigmentation and the devices' features and functions make it a great choice for technicians just starting a business.

NC Digital 1000 \$2795.00

The digital control unit of the Nouveau Contour **Digital 1000** assures a stable needle frequency, despite the resistance of the skin. When resistance of the skin occurs, the microprocessor will adjust the needle frequency accordingly. To make a simple analogy, imagine what occurs when you place your car on cruise control, when the car reaches an incline in the road, it speeds up maintaining a consistent and preset speed. In a similar manner the digital control unit will always maintain a stable needle frequency. The Nouveau Contour **Digital 1000** provides the technician with consistent quality and excellent results. The device is designed with "Soft-touch" buttons that provides a easy and hygienic cleaning of the machine surface.

NC Intelligent \$3495.00

The **Intelligent** was designed to assist the practitioner in distinguishing between the varying areas of application, i.e. eyes, lips, eyebrows and medical. Software installed in the central processing unit, the operating system of the Intelligent, consistently calculates the best needle frequency (speed) needed to achieve optimal pigment retention. Skin structure varies according to the location, because the structure and tolerance of the skin is different for each area of application.

For example: For areola pigmentation, the skin structure is very dense compared to that of an eye lid, which is very thin and supple. When set on "Medical" the **Intelligent** will provide a more efficient way to deposit pigment in those areas, by automatically increasing the power to the hand piece and by adjusting the needle frequency. In a similar manner, when the practitioner is working on an eyeliner procedure, the control unit of the **Intelligent** can be set to "Eyes", which slows down the power to the hand piece and adjusting of needle frequency, therefore depositing pigment more gently.
